Education

Sister Nivedita University

Aug 2024 - 2028

Bachelors of Technology in Computer Science Engineering

Work Experience

Indian Ambassador & Developer - [Stellar](#)

Feb 2026 - Present

As a Stellar developer and officially selected Stellar India Ambassador, I actively contribute to both the technical and community growth of the ecosystem. I have built and contributed to Stellar-based applications focused on secure payments, wallet interactions, account management, and non-custodial transaction flows, implementing reliable signing mechanisms and efficient asset transfer logic to ensure real-world usability. Alongside development, I promote Stellar within the Indian Web3 community by educating developers and students, mentoring new builders, supporting workshops and technical sessions, and creating awareness around Stellar's role in payments and financial inclusion. My role combines hands-on protocol development with ecosystem advocacy, helping drive adoption while strengthening the developer community around Stellar in India.

Founder - [Valdyum Labs](#)

Jan 2026 - Present

We're building an **open-source Web3 AI agent marketplace on Solana** where developers can deploy, sell, and monetize autonomous AI agents — think "App Store for AI agents" with on-chain identity, crypto micropayments, and GPU-local execution..using 0x402, where every API call triggers a self-signed Solana microtransaction with sub-second on-chain settlement.Registered agents as unique on-chain identities via Anchor, storing compressed, tamper-proof metadata through Tapedrive for verifiable, hash-based retrieval.

[Solana](#) & Multi-Chain Systems Engineer - Freelance & Web3 builder

Dec 2025 - Present

Led the integration of Solana blockchain support for [Opus.com](#) trading bot, enhancing functionality and user experience. Developed comprehensive wallet management features and integrated with Solana DEXs like **Jupiter** and **Raydium**. Designed and implemented an efficient payment Infrastructure pipeline for [SafeSol](#) web3 layer1 architecture, for Solana cryptographical data using **Zero Knowledge Proofs & Circom circuits**, validating payments On chain securable and generating a Private receipt showing the sender & receiver wallet address with the hex roots and the instructed nullifiers programs functions managing the processing of a substantial transaction dataset comprising 100 million records. Implemented MEV-aware submission logic optimizing inclusion probability under network stress. Built account-scanning engine evaluating 2K+ accounts at sub-second intervals for liquidation opportunities

Founding Engineer - [Snaapify](#)

July 2025 - Present

As a Founding member and a Full Stack Engineer at Snaapify, I architected and built a responsive, end-to-end photography & Videography booking platform connecting customers with vendors. I developed intuitive user interfaces that handle dynamic booking flows, search and filter systems for services, and vendor profile management. On the backend, I designed and implemented RESTful APIs, database schemas, and session-based logic to reliably manage user accounts, bookings, vendor availability, and payments. I collaborated closely with design and product teams to translate requirements into scalable solutions, optimized application performance, and ensured a seamless experience across customer and vendor workflows.

Generative AI Intern - [AI Wallah](#)

Mar 2025 - April 2025

Built AI-powered web modules integrating NLP-based logic into production applications. Developed backend inference APIs and structured data pipelines.Implemented model-to-frontend integration for real-time AI feature deployment. **Focused on** Applied AI systems, backend engineering and data processing.

Software Engineer Job Simulation — [Goldman sach](#) (Forage) -

Nov 2024 - Dec 2024

I had a chance to gather online experience and learn skills. Completed the Goldman Sachs Engineering Virtual Internship on Forage, gaining practical experience in cybersecurity and cryptography. Worked on real-world tasks related to password protection, hashing algorithms, and system authentication. Learned how to identify and mitigate password vulnerabilities, implement secure cryptographic practices, and apply industry standards for data protection and access control.

Data Analyst Job Simulation — [Deloitte](#) (Forage) -

Oct 2024 - Nov 2025

Completed the Deloitte Data Analytics Virtual Internship on Forage, where I gained hands-on experience in data-driven decision-making and business intelligence. Worked on real-world tasks involving data cleaning, visualization, and storytelling to generate actionable insights. Learned how to analyze and model datasets using spreadsheets, Tableau, and analytical techniques to support strategic business recommendations..

Projects

- **Oregano Finance**: A gasless transaction platform using meta-transactions with a full-stack TypeScript + Next.js architecture, integrating wallet + OAuth authentication and relayer-based execution.
- **Aptos Swap** : An Aptos DEX aggregator with multi-hop route discovery and slippage-aware path optimization for efficient trade execution.
- **Surge** : A high-performance Game-fi execution and liquidity interaction framework focused on optimized transaction routing, priority fee strategy experimentation, and congestion-aware submission logic.
- **L2-MEV** : Detect & prevent sandwich attack, frontrunning and backrunning across Jupiter , Raydium, Orca more with local deployment and CLI & MCP.
- **NPL-Model** : Automating emails quickly and efficiently . Compose to read,write,reply search, and manage your Gmail using natural language — by text or voice. connected through our MCP server and CLI
- **SafeSol** : A Solana transaction simulation and security toolkit implementing pre-execution validation, instruction-level risk detection heuristics, and simulation-based analysis to reduce exposure to malicious or unsafe contract interactions.

Skills

Languages:	Javascript, Typescript, Rust, Solidity, Java, Kotlin, Python, C, C++
SDK & Frameworks:	Next.js, Node.js, Express, Circom, Anchor, Move
Tools & Technologies:	Docker, PostgreSQL, MongoDB, Redis, Nginx, RabbitMQ, AWS, RCOM, Linux, WSL

Leadership & Awards

- Product Pitch to Investors in ISER KOLKATA
- Was part of Spring fest '25 IIT Kharagpur.
- Selected as the Technical Executive for Geeks for Geeks SNU as a Freshman.
- 5 hackathons Wins
- Cracked the CIT exam(Common Internship Test), ranking in the top 0.1%
- Cracked the Entrance Exam for Online program of BS Degree in AI - DS
- Selected for the National Round for SAP Hackfest'25 (Out of 30k+ devs , top 300 devs), also overall travel and accommodation was paid by college for the first time ever .
- Led team [Locals.discord](#) & spoken in a couple of tech events.
- You can also find me at your browser by searching “mesayanroy”.
